

## ROD RIGS

Denarii Well Servicing's fleet consists of Single and Double Rod rigs for efficient conventional sucker rod and light-well maintenance. Our units are designed for quick mobilization and are smaller and faster than a conventional service rig. Standard equipment includes a pump and tank for killing, flushing, and pressure testing wells. The flexibility of our Rod Rigs means they can be paired with a Truck Mounted Gripper (TMG) for continuous sucker rod servicing in addition to conventional sucker rod servicing. Our well trained and seasoned operational staff provide safe, value-added services setting us apart from our competitors. Denarii Well Servicing prides itself on being a reliable industry partner focused on delivering High Performance, High-Value solutions to meet our customers' needs. Denarii has a proven track record of operating safely and efficiently to facilitate lower costs for our customers on numerous well types and projects. Our experienced, competent employees operate equipment in all geographical areas throughout the Western Canadian Sedimentary Basin (WCSB) and the United States. Our fleet is strategically located in Camrose, AB Canada and in Midland Texas U.S.A.

### Key Features

- 52'(15.85m) to 72'(21.99m) telescopic mast with capable of pulling & hanging double rods or single rods depending on the choice of rig design.
  - Conventional draw works, right angle drive driven & conventional brake handle.
  - Pull Capacity ranging from 50,000 lbs (22241.11daN) to 65,000lbs (28913.44daN).
  - McKissick 50-ton block.
- Reagan annular preventer 3000Psi (20.68 Mpa).
  - Mast height ranging from 70ft (21.34m) 104.0ft (31.699m).
  - All units have mobile doghouses with change rooms, electrical generators & bathroom facilities.
  - Dedicated mobile pumps ranging from 21.0 Mpa to 35.0 Mpa pressure rating and 3.0 inches to 4.0 inches charge pumps according to rig design.
  - BOPs can cater requirements of critical sour, class-3 & class-2 wells.
  - Depending on configuration, units can operate on up to 75% road bans.

### Applications

- Conventional and Continuous rod work
- Well flushing
- Fishing
- Polished Rod Changes
