

ELECTRIC WIRELINE CEMENTING & ACIDIZING SERVICES

The combo unit is equipped with complete wireline services, remedial cementing services and acidizing services. Powered by a turbo charged diesel engine with automatic transmission. Tractor has an air-ride suspension equipped with air – operated brakes, high clearance rough terrain chassis. The combo unit is suitable for multiapplications of oil field services to minimize logistical concerns and increase job efficiencies. This allows us to address individual needs of our customers and enhance the quality of our service. The combo unit is manned by a crew of client focused, safety-oriented professionals who specialize in the delivery of wireline, cementing & acidizing services in a timely, economic and safe manner.

Key Features

- 3.5 inches triplex pump c/w 70MPA pressure rating
- 1.25 inches slow rate squeeze pump
- Dustless, recirculating cement mixing system
- 2.0-meter cube slurry averaging tank
- Mobile data acquisition system with real time transmission
- Micro Motion® density measurement 6,850m of 0.25 inches electrical wireline
- Warrior data acquisition system for cased hole logging
- Digital depth and weight display
- 35MPA pressure control equipment
- 8.0 tonne body job bulker for transporting bulk cement form plant to location
- Unique design of combo unit has less environmental footprint

Applications

- Remedial cementing
- Slow rate cement squeezes
- Acid washes
- Acid squeezes
- Cased hole logging
- Perforating
- Coiled tubing operations
- Well completion, workover and abandonment services
